Q1: LAWS TO PROTECT PERSONAL INFO / ALL ADULT RESPONDENTS

DO YOU FEEL THAT THE LAWS THAT CURRENTLY PROTECT PEOPLE'S PERSONAL AND FINANCIAL INFORMATION FROM BEING ACCESSED WITHOUT THEIR APPROVAL ARE TOO STRICT? NOT STRICT ENOUGH? OR ARE THEY JUST ABOUT RIGHT?

THIS IS A SURVEY OF

500

ADULT RESPONDENTS FROM SAN DIEGO DMA

OVERALL RESULTS CONSIDERED SIGNIFICANT

$\pm 4.4\%$

A LARGER \pm APPLIES TO SUBPOPULATIONS

RESULTS MAY NOT ADD TO 100%. BECAUSE PERCENTAGES ARE ROUNDED TO WHOLE NUMBERS

THREE-STRIKE LAW / ALL ADULT RESPONDENTS

IT HAS BEEN SUGGESTED THAT CALIFORNIA IMPLEMENT A SO-CALLED "THREE-STRIKE" LAW TO DEAL WITH CORPORATE CRIMINALS. UNDER THE LAW, COMPANY EXECUTIVES WHO ARE CONVICTED OF THREE CORPORATE CRIMES, SUCH AS INSIDER TRADING OR IRREGULAR ACCOUNTING PRACTICES, WOULD NO LONGER BE ALLOWED TO DO BUSINESS IN CALIFORNIA. DO YOU THINK CALIFORNIA SHOULD IMPLEMENT THIS "THREE-STRIKE" LAW TO DEAL WITH CORPORATE CRIMINALS? OR NOT?

RESULTS MAY NOT ADD TO 100%, BECAUSE PERCENTAGES ARE ROUNDED TO WHOLE NUMBERS

SURVEY • USA[®]

The following is a material part of this report and should be included when data is referenced:

How this poll was conducted: This SurveyUSA poll was conducted by telephone in the voice of a professional announcer. All respondents heard the questions asked identically. Page 1 of this report contains: the geography that was surveyed; the dates interviews were conducted; the news organization that paid for the research; and the name of the random sample provider. The universe of respondents and the margin of error are stated on Page 2 of this report, and if restated on one or more subsequent pages, it is because the universe and margin of error changed for those subsequent questions. Where necessary, responses were weighted according to age, gender, ethnic origin, geographical area and number of adults and number of voice telephone lines in the household, so that the sample would reflect the actual demographic proportions in the population, using most recent U.S. Census estimates. In theory, with the stated sample size, one can say with 95% certainty that the results would not vary by more than the stated margin of error, in one direction or the other, had the entire universe of respondents been interviewed with complete accuracy. There are other possible sources of error in all surveys that may be more serious than theoretical calculations of sampling error. These include refusals to be interviewed, question wording and question order, weighting by demographic control data and the manner in which respondents are filtered (such as, determining who is a likely voter). It is difficult to quantify the errors that may result from these factors. Fieldwork for this survey was done by SurveyUSA of Verona, NJ. These statements conform to the principles of disclosure of the National Council on Public Polls.
